Java

```java
class Solution {
    public int[][] findMaximalUncoveredRanges(int n, int[][] ranges) {

    }
}
```

JavaScript

```javascript
/**
 * @param {number} n
 * @param {number[][]} ranges
 * @return {number[][]}
 */
var findMaximalUncoveredRanges = function(n, ranges) {

};
```

C++

```cpp
class Solution {
public:
    vector<vector<int>> findMaximalUncoveredRanges(int n, vector<vector<int>>& ranges) {

    }
};
```

C#

```csharp
public class Solution {
    public int[][] FindMaximalUncoveredRanges(int n, int[][] ranges) {

    }
}
```
